### Yukon & Yukon II Transmission Gears

#### Yukon & Yukon II (YXL & CXL 150's)

ETON America has 2 different styles of gears for the transmission, the old style that comes on the older YXL 150's which we have limited quantities of. And the new style which come on the CXL-150's. To determine the type of gears you have use the vin # chart at the bottom or the figure pictures on the right.

The new Shift Shaft assembly primary drive gear has been increased in size and tooth count.

We have also added a retainer clip to the shaft along with the pressed collar to insure proper alignment. The drive shaft and counter shaft have been geared to match the new shift shaft assembly.

When replacing any of these parts on CXL-150 with a VIN number less than RFZFB...3A010360 or any YXL-150, all three parts **MUST** be replaced.

Part Numbers are:	New Style	Old Style
Shift Shaft Assembly	800290	812323
Drive Shaft	800103	812325
Counter Shaft	800286	812324
